

CLOUD DEPLOYMENT OPTIONS

ShopEdge is excited to offer flexible deployment options leveraging cloud scenarios resulting in lower upfront costs on hardware and software licenses.

The first option is a hybrid cloud deployment; ShopEdge is installed on-site, while a Microsoft SQL Azure database eliminates additional on-site server hardware and software.

The second option is a fully-deployed cloud solution; the ShopEdge Web Application is deployed on the Microsoft Windows Azure platform and accessed via a web browser for a high performance, affordable solution.

Both solutions reduce implementation time since the environment can be provisioned on demand without any new hardware or software installation.

- Lower initial costs for server hardware and software licenses.
- Make use of current hardware and IT infrastructure.
- Stay connected to your business operations wherever you go across the globe.
- Redundancy and backups are automatic ensuring simplified IT administration.
- Automatic system upgrades keep you up to date with the latest version.
